

MICROSCALE

NEOCLASSICAL MONUMENT

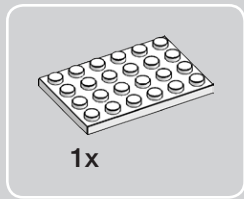

Build this tiny Neoclassical monument using just 32 LEGO bricks. This tiny model has a domed roof, columns and a triangular pediment.

This model uses a railing to recreate four columns and a single part for the entire dome. You can use parts in different ways when you try building at a new scale.

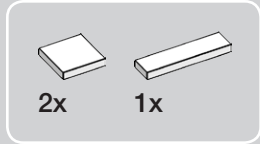

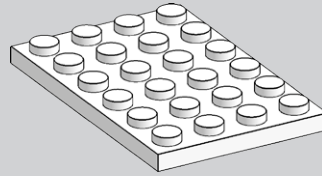

THOMAS JEFFERSON MEMORIAL
Washington, DC, 1943, John Russell Pope, Eggers & Higgins.
